

The project

For its new operations centre, Hydro-Québec opted for a new layout of the control room and a major upgrading of its technology.

Based on its extensive experience in IT and in high-tech furniture design, Sustêma was selected for the project.

This new high security 24/7 surveillance centre allows observation and analysis for all operations of the Hydro-Québec information

network. It is made up of 14 permanently functioning consoles, where 20 employees work daily.

The centre's highly sophisticated equipment includes oversized peripheral monitors, a screen wall for daily data analysis, and specialized furniture for administrative functions.
